Cement Industry in CISCAS Region

This map shows capacity and distribution of cement plants by owning holdings in Russia, Belarus, and CIS states as of the end of 2008. It was made as a big graphic office wall map (230 by 156 centimeters) for AfB Cement company. AfB is the Russian representative of Holcim, one of the world’s leading suppliers of cement and building materials.

The map shows plants as light grey color squares with their names in large type as the main content can be read at some distance, while the background can be read close up. The underwater relief is represented by illuminated contours to increase graphic impression.
