LF-MODULE-ASSISTED ANALOG LAB-ON-A-CHIP MEASUREMENTS WITH R- (650 NM), G- (532 NM), B- (405 NM) LASER SOURCES FOR ANALOG LENS-LESS MICROSCOPY SETUPS

ABSTRACT:
LF-module-assisted analog lab-on-a-chip measurements with R- (650 nm), G- (532 nm), B- (405 nm) laser sources

00:59 - Wavelength: 650 nm (laser diode);
01:25 - Wavelength: 405 nm (DPSSL);
01:43 - Wavelength: 532 nm (DPSSL);

Acknowledgements:

- “Development of the novel physical methods for complex biomedical diagnostics based on position-sensitive mapping with the angular resolution at the tissue and cellular levels using analytical labs-on-a-chip” (RFBR grant # 16-32-00914) [6 838,27 $ per year]
- “Lab-on-a-chip development for personalized diagnostics” (FASIE grant 0019125) [3 039,00 $ per year].
