DISEASE PATHWAYS

An Atlas of Human Disease Signaling Pathways

Anastasia P. Nesterova

Senior Scientist, Life Science Research and Development, Elsevier Inc., United States

Eugene A. Klimov

Head of the Group of Medical and Veterinary Genetics, Lomonosov Moscow State University, Russia

Maria Zharkova

Scientist, Life Science Research and Development, Elsevier Inc./Novel Software Systems, Russia

SERGEY SOZIN

Scientist, Life Science Research and Development, Elsevier Inc./Novel Software Systems,
Russia

VLADIMIR SOBOLEV

Senior Scientist, Mechnikov Research Institute of Vaccines and Sera/the Center for Theoretical Problems of Physicochemical Pharmacology, Russia

Natalia V. Ivanikova

Senior Scientist, Content and Innovation group, Elsevier Inc./Novel Software Systems, Russia

Maria Shkrob

Consultant, Life Science Scientific Services, Elsevier Inc., United States

Anton Yuryev

Biology Director, Life Science Scientific Services, Elsevier Inc., United States

Elsevier

Radarweg 29, PO Box 211, 1000 AE Amsterdam, Netherlands The Boulevard, Langford Lane, Kidlington, Oxford OX5 1GB, United Kingdom 50 Hampshire Street, 5th Floor, Cambridge, MA 02139, United States

Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

Contributors	XV
Foreword: The future of medical discovery	xvii
Preface	xix
Guide and legend	xxi
I	
Introduction	
1. Introduction	
Terminology of cellular systems	3
Introduction to cell signaling	6
Pathways for systems biology	14
References	28
\mathbf{II}	
Human disease pathways	
2. Infectious diseases	
2.1 Human immunodeficiency virus (HIV) and acquired immunodeficiency	
syndrome (AIDS)	37
Key cellular contributors and processes Pathway 1	39 40
HIV entrance to the host cell and viral reproduction	40
Pathway 2	44
HIV-induced depletion of CD4+ T cells	44
Pathway 3	48
HIV latency	48
References	53
2.2 Human T-cell leukemia virus infection and leukemia	
progression	55
Key cellular contributors and processes	57
Pathway 1 HTLV-1 enters the cell	58 58
Pathway 2	60
Transcription and reproduction of the HTLV-1 genome	60

vi Contents

Pathway 3	63
Tax-induced aneuploidy in T cells infected with HTLV-1	63
Pathway 4	65
Tax-induced disruption of the G1/S transition in HTLV-1-infected T cells	65
Pathway 5	68
Tax-mediated dysregulation of NF-kB signaling in HTLV-1 infection	68
Pathway 6	71
p12I viral protein promotes T-cell activation in HTLV-1 infection	71
References	73
2.3 Human papillomavirus infection and cancer	75
Key cellular contributors and processes	77
Pathway 1	78
Human papillomavirus entry into cell	78
Pathway 2	81
Human papillomavirus E1 and E2 proteins in virus replication	81
Pathway 3	84
Human papillomavirus E4 and E5 proteins in viral reproduction	84
Pathway 4	87
Human papillomavirus E6 and E7 proteins promote epithelial cell survival	87
Pathway 5	90
Human papillomavirus E6 and E7 proteins promote epithelial cell	
proliferation	90
References	93
3. Diseases of the blood	
3.1 Anemia of chronic disease (inflammatory anemia)	97
Key cellular contributors and processes	99
Pathway 1	100
Inflammatory mediators raise the production of hepcidin	100
Pathway 2	102
High levels of hepcidin block iron absorption in the gut	102
Pathway 3	105
Impairment of iron release from splenic macrophages	105
Pathway 4	107
Inflammatory mediators inhibit GATA signaling in erythropoiesis	107
Pathway 5	109
The rationale for anemia of chronic disease treatment with erythropoietin	109
References	111
3.2 Hemophilia	112
Key cellular contributors and processes	115
Pathway 1	116
Dysfunction of the coagulation cascade in hemophilia	116
References	118
4. Endocrine, nutritional, and metabolic diseases	
4.1 Diabetes mellitus type I	124

Key cellular contributors and processes	126
Pathway 1	128
Antigen-presenting cells promote islet dysfunction and immune system activation in T1D	128
Pathway 2	131
Defective tolerance of autoreactive T cells in T1D	131
Pathway 3	135
Islet beta-cell destruction in T1D	135
References	138
4.2 Type 2 diabetes mellitus	140
Key cellular contributors and processes	142
Pathway 1	144
Insulin synthesis	144
Pathway 2	149
Hyperglycemia and hyperlipidemia trigger beta-cell apoptosis	149
Pathway 3 Beta-cell proliferation and compensation	152 152
Pathway 4	152
Insulin resistance	159
References	166
4.3 Diabetic neuropathy	169
Key cellular contributors and processes	171
Pathway 1	172
Microangiopathy in diabetic neuropathy	172
Pathway 2	175
Neuron and Schwann cell death	175
Pathway 3	178
Pain perception in diabetic neuropathy References	178 181
4.4 Hypothyroidism	182
Key cellular contributors and processes	184
Pathway 1 Decreased secretion of thyroid hormones	185 185
Pathway 2	190
Cellular effects of thyroid hormone deficiency	190
References	197
4.5 Alpha-1 antitrypsin deficiency	199
Key cellular contributors and processes	200
Pathway 1	201
SERPINA1-associated pulmonary emphysema	201
Pathway 2	204
SERPINA1-associated liver damage	204
References	206
4.6 Cystic fibrosis	207
Key cellular contributors and processes	209

V111	Contents

Pathway 1	210
CFTR expression and degradation in epithelial cells in cystic	
fibrosis (class I-II mutations)	210
Pathway 2	213
Failure of the ion channel function of CFTR in cystic fibrosis airway epithelium (class III-IV mutations)	213
References	217
references	211
5. Diseases of the nervous system	
5.1 Alzheimer's disease	221
Key cellular contributors and processes	223
Pathway 1	224
Amyloid-beta production and functions in Alzheimer's disease	224
References	231
5.2 Amyotrophic lateral sclerosis	234
Key cellular contributors and processes	236
Pathway 1	237
Glutamate and calcium excitotoxicity of motor neurons in ALS	237
Pathway 2 Mutations in SOD1 and associated proteins cause motor neuron	240
death in familial ALS	240
References	244
5.3 Familial hemiplegic migraine (FHM)	246
Key cellular contributors and processes	248
Pathway 1	249
Glutamate overload effects on the activation of prostaglandin E2 and	
NO synthesis	249
Pathway 2	253
Glutamate overload caused by mutations in the genes associated with familial	252
and sporadic hemiplegic migraine References	253 257
References	231
6. Diseases of the eye	
6.1 Glaucoma	261
Key cellular contributors and processes	263
Pathway 1	264
Trabecular meshwork and Schlemm's canal endothelial cell volume	
and contractility	264
Pathway 2	267
MYOC-associated glaucoma Pathway 3	267
Role of neurotrophic factor deprivation in retinal ganglion cell death	2 69 2 6 9
References	271
6.2 Age-related macular degeneration	273
Key cellular contributors and processes	273
Pathway 1	276
Complement activation in age-related macular degeneration	276

_	•
Contents	1X

Pathway 2	278
Oxidative stress, all-trans-retinal, and lipofuscin toxicity in age-related	250
macular degeneration	278
Pathway 3	281
Endoplasmic reticulum stress in age-related macular degeneration	281
References	283
6.3 Cataract	285
Key cellular contributors and processes	286
Pathway 1	287
Age-related cataract	287
Pathway 2 Diabetes-induced cataract	290
	290
Pathway 3	292 292
Congenital cataract References	292
References	293
7. Diseases of the ear	
7.1 Hearing loss	299
Key cellular contributors and processes	300
Pathway 1	302
Dysfunction of cochlear hair cell stereocilia proteins in hearing loss	302
Pathway 2	306
Dysfunctions of cochlear hair cell synapse proteins in hearing loss	306
Pathway 3	309
Impairment of mechanoelectrical transduction and potassium cycling in the inner ear in hearing loss	309
References	312
7.2 Otitis media	315
Key cellular contributors and processes	317
Pathway 1	318
Insufficient activation of immune response in the middle ear epithelium	
cells in otitis media	318
Pathway 2	321
Pathogens stimulate mucins expression in the middle ear	321
References	324
8. Diseases of the circulatory system	
8.1 Atherosclerosis description	330
Key cellular contributors and processes	332
Pathway 1	333
Low-density lipoprotein internalization and the accumulation of lipids	
in atherosclerosis	333
Pathway 2	336
Oxidized LDL causes endothelial dysfunction in atherosclerosis	336
Pathway 3	340
Arterial wall inflammation and calcification in atherosclerosis	340
References	343

X Contents

8.2 Hypertension	345
Key cellular contributors and processes	347
Pathway 1	348
Rise in aldosterone synthesis in adrenal zona glomerulosa cells	348
Pathway 2	351
The role of aldosterone in the regulation of Na ⁺ /Cl ⁻ /K ⁺ homeostasis	351
Pathway 3	354
Dysfunction of smooth muscle cells in hypertension	354
Pathway 4	357
Endothelial cells repress vasoconstriction in hypertension	357
References	360
8.3 Pulmonary arterial hypertension	361
Key cellular contributors and processes	363
Pathway 1	364
Endothelial cells stimulate vasoconstriction and thrombosis in pulmonary	
hypertension	364
Pathway 2	367
The intense proliferation and contractile activity of smooth muscle cells	
in pulmonary hypertension	367
Pathway 3	370
Increased proliferation of PASMCs in familial forms of pulmonary hypertension	370
References	373
8.4 Hypertrophic cardiomyopathy	374
Key cellular contributors and processes	375
Pathway 1	376
Sarcomere disorganization and intracellular calcium overload	376
Pathway 2	379
Cardiomyocyte hypertrophy	379
References	381
8.5 Arrhythmogenic right ventricular dysplasia (ARVD)	382
Key cellular contributors and processes	383
Pathway 1	384
Adherens junction dysfunction in cardiomyocytes in ARVD	384
Pathway 2	386
Desmosome dysfunction in cardiomyocytes in ARVD	386
Pathway 3	388
Cardiomyocyte dysfunction unrelated to cell junctions in ARVD	388
References	390
9. Diseases of the respiratory system	
9.1 Asthma	393
Key cellular contributors and processes	395
Pathway 1	397
Th2 cell response in asthma	397
Pathway 2	402
Eosinophilia and neutrophilia in asthma	402

Contents	371

DISEASE PATHWAYS

An Atlas of Human Disease Signaling Pathways

Anastasia P. Nesterova, Ph.D., Senior Scientist, Life Science Solutions, Elsevier

Eugene A. Klimov, Ph.D., Head of the Group of Medical and Veterinary Genetics, Faculty of Biology,

Lomonosov Moscow State University

Maria Zharkova, Ph.D., Scientist, Life Science Solutions, Elsevier

Sergey Sozin, M.D., Scientist, Life Science Solutions, Elsevier

Vladimir Sobolev, Ph.D., Senior Scientist, Mechnikov Research Institute of Vaccines and Sera, RAMS

Natalia V. Ivanikova, Ph.D., Senior Scientist, Content & Innovation Group, Elsevier

Maria Shkrob, Ph.D., Consultant, Life Science Professional Services, Elsevier

Anton Yuryev, Ph.D., Biology Director, Life Science Professional Services, Elsevier

Disease Pathways: An Atlas of Human Disease Signaling Pathways is designed to fill a void of illustrated reviews about the cellular mechanisms of human diseases. It covers 42 of the most common non-oncologic diseases and illustrates the connections between the molecular causes of the disease and its symptoms. This resource provides readers with detailed information about the disease molecular pathways, while keeping the presentation simple.

Pathway models that aggregate the knowledge about protein–protein interactions have become indispensable tools in many areas of molecular biology, pharmacology, and medicine. In addition to disease pathways, the book includes a comprehensive overview of molecular signaling biology and application of pathway models in the analysis of big data for drug discovery and personalized medicine.

This is a must-have reference for general biologists, biochemists, students, medical workers, and everyone interested in the cellular and molecular mechanisms of human disease.

Key Features

- More than 145 full-color illustrations of the molecular and cellular cascades underlying the disease pathology.
- Disease pathways are based on computational models from Elsevier's Disease Pathway Collection, published for the first time outside of Pathway Studio® commercial software.
- Each relationship on the pathway models is supported by references to scientific articles and can be examined at freely available online resources.
