Трансформация окружающей среды и устойчивое развитие в Азиатском регионе /
Материалы Международной научной конференции (Иркутск, 08–10 сентября 2020 г.). –
Иркутск: Изд-во Института географии им. В.Б. Сочавы СО РАН, 2020. – 186 с.

В сборнике опубликованы тезисы докладов Международной научной конференции «Трансформация окружающей среды и устойчивое развитие в Азиатском регионе». В статьях авторы делятся опытом решения фундаментальных научных проблем в области оптимального экологически ориентированного ресурсообеспечения природопользования и жизнедеятельности населения, а также устойчивого развития трансграничных территорий и регионов, имеющих тесные внешние экологические и социально-экономические связи со странами Северо-Восточной Азии. Особое внимание уделяется изменению природных комплексов в условиях возрастающего антропогенного воздействия на глобальном уровне, сохранению окружающей среды и взаимодействию стран и организаций, как на трансграничных участках, так и в регионах совместного социально-экономического интереса. В рамках конференции обсуждались вопросы развития и совершенствования объективных методов обработки географической информации, новые пространственно-временные модели для анализа и разработки стратегий устойчивого природопользования, «зеленой» экономики и регионального развития, геоинформационные, дистанционные и картографические методы анализа и представления данных о текущем состоянии, временной динамике и трансформации природных и социально-экономических систем.

Сборник ориентирован на широкий круг ученых-географов и экономистов, преподавателей, учащихся высших учебных заведений и представителей органов государственного управления различного уровня, интересующихся проблемами экологии, эффективного природопользования и территориального развития.

Environmental transformation and sustainable development in the Asian region.
Proceedings of the International scientific Conference (Irkutsk, September 08–10, 2020), Irkutsk:
Sochava Institute of Geography SB RAS, 2020. – 186 p.

The proceedings of the International scientific Conference “Environmental Transformation and Sustainable Development in the Asian Region” were published in the collection. The publication features articles on solving fundamental scientific problems with the authors sharing their experience in the field of optimal environmentally-oriented natural resource use and livelihoods of the population, as well as sustainable development of transboundary territories and regions with close external environmental and socio-economic ties with the countries of Northeast Asia. Particular attention is paid to changes in natural complexes under increasing human-induced impact at the global level, environmental preservation and interaction of countries and organizations both in transboundary areas and in regions of joint socio-economic interest. The conference discussed the development and improvement of objective methods for processing geographic information, new spatio-temporal models for analysis and development of strategies for sustainable environmental management, green economy and regional development, geoinformation, remote and mapping methods of data analysis and presentation on current state, temporal dynamics and transformation of natural and socio-economic systems.

The collection is aimed at a wide range of geographers and economists, teachers, university students and representatives of government bodies of various levels interested in the problems of ecology, effective environmental management and territorial development.

Peatlands are the most significant long-term accumulator of atmospheric carbon on the land. The important climate-forming role of large peatland systems is related to their influence on the regional balance of carbon dioxide, methane, heat and moisture. This report summarizes the results of field studies of carbon dioxide and methane fluxes in peatland ecosystems on the territory of the licensed areas of the Salym Petroleum oil fields (Khanty-Mansijsk Autonomous Region, Russia), the total annual greenhouse gas fluxes and suggest recommendations on the exploitation of oil fields aimed at increasing greenhouse gas accumulation by peatlands.

The results of field measurements of greenhouse gas fluxes were extrapolated for the entire growing season using mathematical models. The net ecosystem exchange is formed as the difference between photosynthetic assimilation of carbon dioxide by plants and CO₂ emissions in the process of respiration of plants and microorganisms. Peatland ecosystems with large biomass storages, including those in the tree layer, have significant fluxes (more than 1500 gCO₂ m⁻²) associated with photosynthesis, but the ecosystem respiration component (750-2200 gCO₂ m⁻²) is also high. As a result, the highest net carbon dioxide accumulation was observed in the mesotrophic sedge-sphagnum fen and in the treed bog, taking into account the tree layer (603 gCO₂ m⁻²). The other types of bogs accumulate 244-466 gCO₂ m⁻².

The total methane emission from the studied bogs has the highest values (32.6 gCH₄ m⁻²) at mesotrophic sedge-sphagnum fen. The other types of wetlands are divided into waterlogged (characterized by flux of 7-11 gCH₄ m⁻²) and relatively dry (with the level of bog waters 20-30 cm below the surface) (flux 4-6 gCH₄ m⁻²).

Essential fluxes of carbon dioxide and methane were recorded from the surface of the disturbed bogs - clearings along the low treed bog, where, depending on the ground cover, CO₂ emission vary in rangee 339 - 1267 2200 gCO₂ m⁻², and CH₄ emission is 12.5 gCH₄ m⁻². An assessment of the regional greenhouse gas balance for an area of 1,497 km² showed that in total terrestrial ecosystems absorb about 666 000 t in CO₂ equivalent per year. Forests annually accumulate 558 500 t, and peatland ecosystems absorb a total of 112 800 t.

Despite the fact that the intensity of annual carbon accumulation in forest ecosystems is higher than in peatlands, in the long-term perspective, peatlands conserve more atmospheric carbon than forests. According to the results of radiocarbon analysis of the upper layers of peat, long-term accumulation in the bog ecosystems of the study area is 59 600 t CO₂ per year, and long-term carbon accumulation in the soil of forest ecosystems is estimated at 22 000 t CO₂ per year.

This work was partially supported by Salym-Petroleum Development N.V. Company (contract No. MOS / 19/0053), by the Yugra State University (grant No. 17-02-07/58) and by RFBR and Government of the Khanty-Mansi Autonomous Area - Yugra according to the research project № 18-44-860017.

Volchatova E.V., Bezrukova E.V., Kulagina N.V., Levina O.V. PALEOECOLOGY OF LAKE ILCHIR'S CATCHMENT IN HOLOCENE AS A BASIS FOR UNDERSTANDING THE MODERN REGIONAL VEGETATION STRUCTURE	143
Voronov B.A. ECOLOGICAL AND GEOGRAPHICAL PREREQUISITES FOR THE ANTHROPOGENIC TRANSFORMATION OF THE NATURAL ECOSYSTEMS IN THE AMUR REGION	144
Yanchuk M.S., Vorobyova I.B., Vlasova N.V. CURRENT ECOLOGICAL STATUS OF SNOW COVER AND ICE ON THE SOUTH-WEST COAST OF LAKE BAIKAL (ON THE EXAMPLE OF GOLOUSTNENSKOYE SETTLEMENT).....	145
SESSION 4. «NEW METHODS AND TECHNOLOGIES FOR PROCESSING GEOGRAPHIC INFORMATION USING REMOTE SENSING, GIS AND MATHEMATICAL MODELING IN RESEARCH OF ENVIRONMENT AND SUSTAINABLE REGIONAL DEVELOPMENT»	146
Adilov B.A., Shomurodov H.F., Karimov F.I., Beshko N.Yu. THE USE OF ENVIRONMENTAL PREDICTORS IN THE CREATION OF FORECAST MODELS FOR THE DISTRIBUTION OF HABITATS OF RARE AND ENDEMIC PLANT SPECIES IN CENTRAL ASIA	146
Baryshnikova O.N., Olfert A.P., Zvyagintseva E.V. MODERN LANDSCAPE DIVERSITY OF ASIA REGIONS	147
Bychkov I.V., Ruzhnikov G.M., Fedorov R.K., Hmelnov A.E. ORGANIZATION OF DIGITAL ENVIRONMENTAL MONITORING: PROBLEMS, SOLUTIONS	148
Chen Xiaona and Yang Yaping DECLINED SPRING SNOW DEPTH OVER THE QINGHAI-TIBETAN PLATEAU INDUCED BY INCREASED MINIMUM AIR TEMPERATURE FROM 1960 TO 2013 BASED ON METEOROLOGICAL OBSERVATIONS	149
Dashpilov Ts.B. ENVIRONMENTAL PROBLEMS OF THE DEVELOPMENT OF TRANSPORT IN THE TRANSBOUNDARY REGION AS EXEMPLIFIED BY THE BAIKAL BASIN AND ITS CARTOGRAPHIC STUDY.....	150
Du Jia, Yang Yaping, Yue Xiafang WEBGIS-BASED NATURAL DISASTER INFORMATION SYSTEM OF NORTHEASTASIAN.....	151

Hmelnov A.E., Gachenko A.S. TECHNOLOGY FOR CONTOURING OF FLOODING RIVERSIDE AREAS OF THE HYDROELECTRIC STATIONS' CASCADE OF THE ANGARA RIVER	152
Ignatov A.V. «STOCHASTIC MODELING»: APPLICATIONS IN GEOGRAPHY	153
Ilicheva E.A., Rogachev A.P. AN ESTIMATION OF SEDIMENT YIELD IN THE WINTER LOW WATER IN THE CHANNELS OF THE SELenga RIVER DELTA ACCORDING TO EXPERIMENTAL DATA	154
Jia Shuzhen, Yang Yaping LAND USE/LAND COVER CHANGE AND UNDERLYING DRIVING FORCES IN HEILONGJIANG(AMUR)RIVER BASIN	155
Kitov A.D. TECHNOLOGY OF STUDYING THE NIVAL-GLACIAL FORMATIONS OF THE MUNKU-SARDYK MOUNTAIN RANGE	156
Kuznetsova V.P., Kuznetsova E.A., Kushanova A.U., Isupov V.A. GEOINFORMATION ANALYSIS OF ZONES WITH SPECIAL CONDITIONS THE USE OF TERRITORIES FOR SUSTAINABLE REGIONAL DEVELOPMENT	157
Kuznetsova T.I. MAPPING THE GEOSYSTEM CHARACTERISTICS OF TRANSFORMATIONS OF THE NATURAL ENVIRONMENT OF LARGE REGIONS	158
Lesnykh S.I. IMPLEMENTATION OF THE ENVIRONMENTAL LEGAL MECHANISM OF NATURE PROTECTION FOR REGULATING RECREATIONAL ACTIVITIES IN THE TERRITORY	159
Myadzelets A.V., Luzhkova N.M., Li Zehong INTERACTIVE MAPPING AND GEOSYSTEM ENVIRONMENTAL-EDUCATION FUNCTION OF NATIONAL PARKS	160
Rasputina E.A. GEOINFORMATION ANALYSIS OF THE PERIOD OF THE STABLE SNOW COVER OF THE PRIBAIKALYE	161
Repko A.G, Baryshnikova O.N. STUDY OF SEASONAL DYNAMICS OF LANDSCAPES OF THE ALTAI REGION BASED ON DATA FROM THE GLOBAL LAND MONITORING SYSTEM (LMCS) «COPERNICUS»	162
Ryazanova A.A., Voropay N.N., Dyukarev E.A. BIAS-CORRECTED PRECEPITATION DATA FOR SOUTH SIBERIA.....	163
Sedykh S.A. METHODS FOR MAPPING INFORMATION ABOUT THE STRUCTURE AND DYNAMICS OF GEOSYSTEMS OF THE MOUNTAINS OF BAIKAL REGION	164
Silaev A.V. APPLICATION OF GLOBAL SATELLITE MAPPING SYSTEMS IN GEOINFORMATION ANALYSIS OF ANTHROPOGENICALLY ALTERED LANDSCAPES IN THE BASIN OF LAKE BAIKAL.....	165
Vanteeva Yu.V., Solodyankina S.V. METHODS OF ASSESSMENT AND MAPPING PHYTOMASS PRODUCTION FUNCTION	166
Vorobyev A.N. THE STUDY OF ALTERNATIVE SOURCES OF INFORMATION IN THE RESEARCH OF LOCALIZATION AND MOBILITY OF THE POPULATION	167
Wang Hongzhi, Yang Yaping LAKE AREA CHANGES AND CAUSES ANALYSIS ON THE MONGOLIA PLATEAU FROM 2000-2019	168
Zharkov M.L., Kazakov A.L., Lempert A.A. ON THE MODELING OF TRANSIENT PROCESSES IN MICROLOGISTIC TRANSPORT SYSTEMS.....	169
Zhuravskaya M.A., Kazakov A.L., Petrov M.B. THE IMPACT OF THE SUSTAINABLE DEVELOPMENT CONCEPT ON THE INDICATORS OF TRANSPORT ACCESSIBILITY AND AVAILABILITY	170
Zima Y.V., Zima L.N., Usmanov M.T., Veselkov G.O. RAPID ANALYSIS OF THE CHANNEL PROCESS USING AN UNMANNED AERIAL VEHICLE	171

SESSION 5. «THE ROLE OF GEOGRAPHICAL EDUCATION AND EDUCATIONAL FUNCTIONS OF ENVIRONMENT IN THE MODERN CONCEPTS OF SUSTAINABLE DEVELOPMENT»	172
Atutova Zh.V., Kobylkin D.V, Zhao Minyan EDUCATIONAL POTENTIAL OF LANDSCAPE- RECREATIONAL RESOURCES OF COASTAL AREAS OF LAKE BAIKAL.....	172
Gorbunova A.N. THE APPLICABILITY OF URBAN PLANNING TECHNIQUES FOR ENVIRONMENTAL PROTECTION OF THE 1980S IN MODERN CONDITIONS	173
Ippolitova N.A., Rogovskaya N.V. STUDENT INITIATIVES AND PERSONAL SELF-REALIZATION IN PROFESSIONAL GEOGRAPHICAL EDUCATION	174
Lesnykh S.I., Korolkova E.E. FEATURES OF GEOSYSTEM AND ECOSYSTEM APPROACHES IN ECOLOGICAL EDUCATION.....	175
Tiunkova I.A. PROFESSIONAL AND PEDAGOGICAL TRAINING OF FUTURE GEOGRAPHIC TEACHERS	176

Научное издание

ТРАНСФОРМАЦИЯ ОКРУЖАЮЩЕЙ СРЕДЫ И УСТОЙЧИВОЕ РАЗВИТИЕ В АЗИАТСКОМ РЕГИОНЕ

*Материалы Международной научной конференции
(Иркутск, 08–10 сентября 2020 г.)*

Подписано в печать 18.09.2020 г.

Формат 60×90/8. Гарнитура Times New Roman. Бумага Ballet.
Уч.-изд. л. 20,4. Усл. печ. л. 21,7. Тираж 300 экз. Заказ № 898.

Издательство Института географии им. В.Б. Сочавы СО РАН
664033, Иркутск, ул. Улан-Баторская, 1
